

Edgework Options

Seamed Edge – This edge is done with a hand grinder or upright belt sander. This is more of a safety precaution to remove any sharp burrs for safe handling and is not intended for decorative use. City Glass Company will not sell cut glass; all glass that is cut in our shop must be seamed.

Flat Ground – This is a step up from the seamed edge. The entire edge of the glass is ground with a sanding belt and is slightly rounded leaving a flat matte ground edge.

Flat Polish – Flat Polished edges are the most popular. Polished edges are produced by a glass edging polishing machine with a number of polishing wheels creating a simple, clean, and a glossy finish. This edgework cannot be done in shop and is a special order.

1/2" BEVEL

3/4" BEVEL

1" BEVEL

1 1/4" BEVEL

1 1/2" BEVEL

1 3/4" BEVEL

Beveled Edge – A Bevel is an angle on the top of the glass around the perimeter to produce an elegant look. It can be done on glass from 1/8 – 3/4" thick. The bevel range is from 1/2" – 1 3/4" wide. This edgework cannot be done in shop and is a special order.
